Profile

I am a highly motivated data scientist and statistician with expertise in big data analysis and predictive modeling based on artificial intelligence. I am proficient in statistical programming languages, including R, SAS, SPSS, PLINK, and Python. Notably, I have received three patents for machine learning-based metabolic disease prediction models as part of Korea's national R&D projects. Additionally, I served as Chief of the Precision Medicine Lab at Seoul National University.

Education

03/2016 – 08/2022
Seoul, South Korea **Doctor of Philosophy, Medical Science**
Seoul National University Graduate School, Department of Biomedical Sciences

03/2012 – 02/2016
Seoul, South Korea **Bachelor of Statistics**
Sungshin Women's University, Department of Statistics

Skills

Statistical analysis <i>R, SAS, SPSS, PLINK, Python</i>	● ● ● ● ●	Artificial intelligence modeling <i>Machine learning and Deep learning</i>	● ● ● ● ●
Healthcare data management <i>Data scientist</i>	● ● ● ● ●	Epidemiology <i>Biomedical science background</i>	● ● ● ● ●

Professional Experience

06/2015 – 08/2015
Ilsan, South Korea **Intern**
National Cancer Center
Investigated the association between colorectal cancer and dietary intake.

06/2014 – 08/2014
Seoul, South Korea **Intern**
Seoul National University Cancer Research Institute
Investigated hereditary breast cancer and analyzed cohort data from the Korean Hereditary Breast Cancer Study (KOHBRA).

03/2016 – 08/2022
Seoul, South Korea **Full-time graduate student**
Seoul National University Graduate School
Mastered advanced biostatistics and epidemiology and developed metabolic disease prediction models using artificial intelligence methods.

10/2022 – present
Ilsan, South Korea

Postdoctoral fellow

National Cancer Center

Investigated the relationships between environmental and genomic factors in cancer and developed cancer prediction models using artificial intelligence.

Projects

03/2018 – 12/2020

Implementation Research for Blood Pressure Management in Elderly

National R&D Projects

Calculated sample sizes for Randomized Controlled Trial (RCT) and analyzed clinical data.

09/2017 – 08/2020

Estimation of the Population Attributable Fraction (PAF) of Major Risk Factors for Cancer Among Koreans

Korean Foundation for Cancer Research Project

Estimated population-attributable risk for cancers and projected cancer incidence and mortality in Korea.

04/2016 – 12/2018

Development of Individualized Preventive Management Service Model through Implementation of Disease Risk Atlas and Risk Prediction of Korean Common Chronic Diseases

National R&D Project

Collaborated with an engineering team to develop machine learning-based metabolic disease prediction models using R, SAS, and Python.
